ABSTRACT

Our project aims to develop a system that would find relevant grant provider establishment/program according to the data that will be provided by the user as an input. This algorithm will be implemented with using the platform that will be used by the company. As our aim is to develop an algorithm to find the suitable grant association, there will be a primal research to be done in order to find all grant establishments local and global, then a relevant Scategorization will be done according to criteria of these establishments. The most suitable platform for the algorithm will be found, legal requirements will be checked and the algorithm will be provided as the final outcome of the project. Before initiating the project, there will be the requirement of an immense research of all grant provider firms and also we have to be careful with selection of the software.

OBJECTIVES

- To provide the accurate grant for companies and entrepreneurs by asking the convenient questions.
- To develop an algorithm according to the categorizations of grant programs.

RESULTS AND DISCUSSION
