

ABOUT THE PROGRAM

Our main objectives are to conduct internationally competitive research and deliver high quality teaching. The department conducts research across a wide range of topics, and targets both fundamental advances and practical applications of science and technology. The quality and impact of our research are demonstrated by our many highly cited publications, the personal recognition of our researchers through awards and honours, and the commercial adoption of our results and innovations.

The discipline of electronics engineering is grounded in the sciences and in mathematics. If you enjoy these subjects, then you will find electrical engineering a fascinating and rewarding field of study with many opportunities to solve key engineering problems. Subareas within the discipline range from the exploration of information and its communication, through the physics of new materials and devices and the circuits made from them, to the algorithms that run on next generation computing platforms.
